

## Instructions for the use of SMS trading signals

**1. In sms, entry prices and "+/-" are indicated.** All entries are indicated with an error of 1 to 4 points, after two or three periods, the entries into the transaction may be relevant slightly higher or lower than the proposed price (take into account the slope of the line, the displacement of the moving average (MA)). You can find the technical analysis on these signals in the "Analytics" section of your Personal cabinet.

**2. Take Profit (TP)** is offered both minimum and maximum. If you focus on maximum goals, then, when you reach the minimum goal, SL should be transferred to the opening price.

**3. Stop Loss (SL)** - it is strongly recommended NOT to change the size of S / L at your discretion!

### **4. RULE OF 5 PERIODS:**

- if the pending order does not work within 5 periods - analyze the situation: if the signal is relevant, then we do not remove the pending order, but if the signal is not relevant (the price has significantly moved from the pending order) - it must be removed.

- if the position is open for more than 5 periods and has not reached TP, analyze the situation: if the signal is relevant, then we wait for it to work out, if there are doubts about its relevance, then it is better to close the deal with the plus that it has, and if the position is in the minuses - TP is transferred to the opening price.

**5. Before the night, we delete all the pending orders**, open positions are closed ex post, or SL is transferred to the opening price, and if the position is in minuses - TP is transferred to the opening price.

**6. Follow the news!** Prior to important news, pending orders are deleted, open positions are either closed by fact, or SL is transferred to the opening price, and if the position is in the minuses - TP is transferred to the opening price. After the news, we analyze the situation - if there were no sharp movements in the market and the signal is relevant, then pending orders are restored.

**7. If the price lacks several points for the pending order** (from 1 to 5 points for M15, H1 and 1 to 10 points for H4) and has worked out the minimum profit, the order should be deleted.

**8. If pending orders are placed on Fibonacci levels**, and the movement continues without correction, then we independently move the Fibonacci levels and we move the established orders according to these new levels.

### **Instructions for trading on the news.**

**1. Transaction entering price** is not indicated. It is calculated independently based on the actual price in the market and the proposed trim.

**2. Take Profit (TP)** is offered both minimum and maximum. If you focus on maximum goals, then, when you reach the minimum goal, SL should be transferred to the opening price.

**3. Stop Loss (SL)** - it is strongly recommended NOT to change the size of S / L at your discretion.

**4. Pending orders** are placed 3-5 minutes before the release of important news.

**5. If there are no sudden movements** in the market and pending orders are not opened within 1 minute after the news publication, then the orders should be deleted.

**6. If one of the pending orders has worked out**, then the second order should be immediately deleted.

**Have a good luck and big gains!**
